

# Kestrel 1967

## Title

Kestrel 1967

## Description and Summary of Results

This has always been listed as a BTO survey but the published paper (noted below) and the papers stored in the BTO archives suggest that it was solely an analysis of existing ringing and recovery data, especially referring to the periodic peaks in annual ringing totals, and that there was no survey as such. Analyses of brood size, movements and mortality were included.

## Methods of Data Capture

## Purpose of Data Capture

## Geographic Coverage

## Temporal Coverage

It was originally noted as taking place in 1967.

## Other Interested parties

## Organiser(s)

David Snow.

## Current Staff Contact
